Energy Justice
What’s in this module?

**Description**
This module includes content from energy justice activists, policy makers, scientists, community organizations, and other individuals. The module contains an introduction to energy justice, an overview of the U.S. energy system, special topics in energy justice, perspectives on energy justice, energy justice conflict, and information on the Just Transition.

**Contents**
- 7 parts
- 3 videos
- 1 podcast
- 3 readings
- 9 activities
- 3 project options

**Key Resources**
- MIT Interview with Shalanda Baker
- Energy Justice Initiative
- MIT Renewable Energy Clinic
- The Climate Justice Alliance
Learning Objectives

01 Understand energy justice in policy, research, science, and technology

02 Discover local and international energy justice case studies

03 Understand and analyze the Just Transition framework

04 Identify how you can implement energy justice in your work and life
Introduction to Energy Justice

PART 1
What is Energy Justice?

Definition
Energy justice emphasizes equitable energy transitions for marginalized communities and including communities in energy policy research, discussion, development, and implementation.

Objective
Energy justice aims to understand the socio-political and historical factors that determine what energy people use, why they use it, how much they consume, and where they access it from.
Initial Discussion of Energy Justice

Discuss these questions in small groups

- Do you think this energy justice explanation is complete? What would you add?
- Can you think of examples of energy justice in your community, country, or the world?
- How do you think energy justice can help the climate justice movement?
- How do science and technology impact social justice?
- How can energy developments be more equitable?

For more see the Just Transition and Intro to Climate Justice modules
Activity #1

The History of the Energy Justice Movement

Browse and analyze
Browse and analyze this timeline of Environmental Justice from the Congressional Black Caucus Foundation.

Discussion questions
- When did Energy Justice start as a sub-movement of Environmental Justice?
- How is Energy Justice similar and dissimilar to Environmental and Climate Justice?
- What events are pivotal to energy justice?
## Energy Justice Policy Areas

<table>
<thead>
<tr>
<th>Area</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>01</strong> Access to energy</td>
<td>Including connection to the grid, as well as access to affordable and functional renewable energy as a human right.</td>
</tr>
<tr>
<td><strong>02</strong> Utility structure</td>
<td>The transition to renewables does not have to follow the centralized grid model.</td>
</tr>
<tr>
<td><strong>03</strong> Community solar energy</td>
<td>Allowing communities to collectively address their energy needs with renewables.</td>
</tr>
<tr>
<td><strong>04</strong> Net energy metering</td>
<td>Policy to encourage rooftop solar by crediting customers for solar energy they produce on their bill.</td>
</tr>
<tr>
<td><strong>05</strong> 100% renewable energy</td>
<td>The goal of 100% or near 100% renewable energy in cities and towns can be met through many paths and sectors.</td>
</tr>
</tbody>
</table>
The U.S. Energy System

PART 2
The Basics

History of the U.S. energy system
Energy demands have been on the rise throughout history. Since the 1950s, most of the energy consumption in the U.S. has come from petroleum.

Structure of the U.S. energy grids
- The U.S. has a divided energy system with the Eastern, Western, and Texas power grids
- While power is shared within each grids, grids cannot easily send energy to locations in other grids
- Within each grid, different regions receive power from a handful of companies
Case Study #1

Comparing Energy Systems: MA V. NE

Massachusetts
Energy in MA is provided by Eversource, National Grid, UNITIL, and municipal electric companies, which are all are registered with the Federal Energy Regulatory Commission.

Nebraska
Energy in NE is provided by consumer-owned non-profit electric cooperatives, municipalities, and public power districts.

Takeaways
- Energy in both NE and MA comes from a number of sources, but their grids are organized differently.
- Different power systems and monopolized power providers leave the US vulnerable to grid failures as climate change increases extreme weather events.
- The grid’s design leaves some people struggling for energy access, and makes it more difficult to electrify or make the switch to renewables.
Power utilities are built for the 20th century. That’s why they’re flailing in the 21st.

Read

*Power utilities are built for the 20th century. That’s why they’re flailing in the 21st.*

Post-reading discussion questions

- After reading, what are your thoughts on the current energy system in the U.S?
- Do you agree with the author?
- How do you think the energy system can be improved?
Special Topics in Energy Justice

PART 3
Energy Insecurity

Who it affects
Addressing energy insecurity is a key issue for energy justice activists because it affects hundreds of thousands of people in the U.S.

How can we equitably and economically provide people with cleaner energy solutions?
Community Solar Energy

What is community solar energy?
Community solar includes projects that benefit multiple energy consumers in one geographic location.

Instead of placing the burden on individuals to fund and maintain their own solar, community energy projects work for many people.

More Information
- See Native Renewables for information on Native Community Energy Projects
- US DOE Community Solar Basics
INTRODUCING DR. SHALANDA BAKER

Watch
MIT Energy Justice with US DOE's Dr. Shalanda Baker

Read
Mexican Energy Reform, Climate Change, and Energy Justice in Indigenous Communities

Discuss the video and the paper
- How is energy justice a complicated issue?
- How is this demonstrated by wind farms in Oaxaca?
- How can we meet growth sustainably?
Case Studies: Perspectives on Energy Justice

PART 4
Listen
Jihan Gearon: Towards a Just Transition

Discuss
BMWC has been working for just, renewable energy on the Navajo nation for over 20 years.

How is the Navajo Nation working towards a Just Transition?

Jihan Gearon
Executive Director, Black Mesa Water Coalition
RURAL PERSPECTIVE

Watch

*Even in the bright of day, some Central Washington residents have a solar energy ‘nightmare’*

Discuss

- What is the conflict arising in rural areas over clean energy?
- What do you see as a potential solution to this problem?
What do the authors suggest for an ethical energy transformation?

**Highlights**

- Sociotechnical transitions studies must better explore questions of ethics and justice.
- Ethical considerations can be integrated at the niche, regime and landscape levels of analysis.
LOCAL PERSPECTIVE

Read
The Little City That Could: For Chelsea, Massachusetts, a new microgrid means energy resilience.

Discuss
- How has the community had to fight to build a microgrid?
- What does energy resilience mean for vulnerable communities?
COMPARING PERSPECTIVES

Choose a case study
Split into 4 groups, and choose one of the perspectives on energy justice from slides 18–21 to review as a group.

Share out with the class
Compare the similarities and differences of each discussed perspective. What leads to the differences in people’s opinions and perspectives on energy justice and how it is implemented? How can we remediate conflicting beliefs?

GreenRoots volunteer Nohemi Lobato, pictured in front of the David Fitcher mural “Chelsea Resilient,” was among the local activists pushing for a microgrid project. Ryan Christopher Jones
Energy Justice

Conflict

PART 5

Renewable Energy Projects

Renewable energy isn’t a simple transition
Community groups, Indigenous tribes, local conditions, and government interests all play a different role in the Just Transition.

Discuss with a partner
- What conflicts can you imagine arising from a transition to clean energy?
- How can we reconcile competing interests to promote clean energy without violating a community’s rights?

"Cut carbon pollution, unlock clean energy - PeoplesClimate-Melb-IMG_8352" by John Englart (takver) is licensed under CC BY-SA 2.0.
Explore and review case studies
MIT Renewable Energy Siting Clinic

Discuss as a class
• What factors are most important for expanding renewable energy?
• What are the key conflicts you noticed?
• What concerns do people have?
• What are commonalities between the case studies on the map?
• Why mitigation?
The Just Transition

PART 6
Introduction

What is the Just Transition
The Just Transition is a vision-led, unifying and place-based set of principles, processes, and practices that build economic and political power to shift from an extractive economy to a regenerative economy.

The origins of the Just Transition
Just Transition strategies were created by low-income communities of color fighting against environmental injustice, aiming to phase out industries that bring disproportionate harm to the workforce.

The goals of the Just Transition
- Shift economic control to communities
- Democratize wealth and the workplace
- Advance ecological restoration
- Drive racial and social equity
- Relocalize most production and consumption
- Retain and restore cultures and traditions

See the Climate Justice Alliance website to learn more
The Just Transition Framework

**Extractive Economy**
- **WORLDVIEW**
  - Consumerism & Colonial Mindset

- **RESOURCES**
  - Extraction, Dig, Burn, Dump

- **GOVERNANCE**
  - Militarism

- **PURPOSE**
  - Exploitation, Enclosure of Wealth & Power

**Regenerative Economy**
- **WORLDVIEW**
  - Caring & Sustainability

- **RESOURCES**
  - Local, National, International

- **GOVERNANCE**
  - Deep Democracy, Cooperation

- **PURPOSE**
  - Ecological & Social Well-being

**Values Filter**

A Just Transition Must
- Shift economic control to communities
- Democratize wealth and the workplace
- Advance ecological rationality
- Overcome racial justice and social equity
- Reconnect work, production, and consumption
- Restore and refresh cultures and traditions

**Change the Rules**

Stop the bad solutions that are visionary and oppositional

**Build the New**

Draw down money and power

Invest in power, feed & grow
### CJA’s Principles of the Just Transition

<table>
<thead>
<tr>
<th>Requires Regenerative Ecological Economics</th>
<th>Creates Meaningful Work</th>
<th>Upholds Self Determination</th>
<th>Equitably Redistributes Resources and Power</th>
</tr>
</thead>
<tbody>
<tr>
<td>Advance ecological resilience, reduce resource consumption, restore biodiversity and traditional ways of life, and undermine extractive economies that erode the ecological basis of our collective wellbeing.</td>
<td>A Just Transition centers on the development of human potential and creating opportunities for people to learn, grow, and develop to their full capacities and interests.</td>
<td>The people who are most affected by the extractive economy have the resilience and expertise to be in the leadership of crafting solutions.</td>
<td>Fights to reclaim capital and resources for the regeneration of geographies and sectors of the economy where these inequities are most pervasive.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Moves us Toward Buen Vivir</th>
<th>Retains Culture and Tradition</th>
<th>Embodies Local, Regional, National and International Solidarity</th>
<th>Builds What We Need Now</th>
</tr>
</thead>
<tbody>
<tr>
<td>The rights of peoples, communities and nature must supersede the rights of the individual.</td>
<td>Just Transition must create inclusionary spaces for all traditions and cultures, recognizing them as integral to a healthy and vibrant economy.</td>
<td>Our solutions call for local, regional, national and global solidarity that confronts imperialism and militarism.</td>
<td>We must build and flex the muscles needed to meet our communities needs.</td>
</tr>
</tbody>
</table>
REAL PEOPLE, REAL CHANGE: GLOBAL CASE STUDIES

ACTIVITY #6

Choose a country to read about
- Poland
- India
- Canada
- Indonesia
- Egypt
- Ukraine

Read your country’s case study
*Real people, Real Change* (p.17–34)

Discussion questions
Work in groups of 3–4 with students who read about different countries. Work with each other to share information about the country you read about. Then, consider these questions:
- What stood out to you most?
- What similarities and differences are there in each country’s experience?
- What kind of framework could be created for just transitions based on these case studies?
**ACTIVITY #7**

**FOLLOW-UP ON THE PRINCIPLES OF THE JUST TRANSITION**

**Brainstorm**

Individually brainstorm the principle that stands out to you most, considering these questions:
- How does this principle advance the Just Transition?
- How does it apply to your personal concerns? What about professional ones?
- Where/how have you seen this principle being acted upon?
- Does your institution do a good job of enacting it?

**Share out**

Participate in a 2 minute dyad, where in pairs you will each have 1 minute to talk about your thoughts about these principles. Listeners should not interject, and instead focus on being an active listener.
UNDERSTANDING WHAT THE JUST TRANSITION LOOKS LIKE THROUGH CASE STUDIES

ACTIVITY #8

Pick a case study
1. Climate Conversation: An Appalachian Perspective on Just Transitions
2. Changing Woman: One Navajo’s Fight for a Just Transition
3. Legacies of Coal: In Search of a Just Transition Panel

Read this white paper
Changes in the contribution of coal to tax revenues in Greene County, PA, 2010–2019

Discussion questions
- How do they address the principles of the just transition?
- What are some ways each of these could improve? What communities, if any, were missing from the conversation?
- How do they talk about how the Just Transition has been helpful for different communities?
- What can governments, businesses, and institutions do to ethically engage resource stakeholders?

This activity can be structured as a mini-presentation, group discussion, or another dyad/triad so that each person learns about a case study they didn’t look at.
Create a concept map

Construct a concept map of a Just Transition framework, centering the case study that you studied in Activity #8.

This activity builds off of Activity #8.
Beyond the Module

PART 7
Taking Action on a Just Transition

How does a Just Transition relate to your life?
Explore the “Take action by assessing + proposing climate action at your school” section of All We Can Save’s “Assignments to spark action." The section can be found in the list of Level 2 (Taking action: Community level) assignments.

Research ways the Just Transition might be supported better by your institution
Guiding questions: What labs/groups on campus are focusing on Just Transition ideas already? Where should there be more conversations around these ideas?

Share out your ideas with the class and consider these questions
• How would you go about making these changes?
• Who would you have to convince, and what voices would you want to uplift?
• How would you reach out to different communities and stakeholders on campus to make this change realized?
A US Energy Justice Dashboard Data Report

**Prompt suggestion**

Research socioeconomic, demographic, and industry data of the city/county using [DATA USA](#). Look at neighborhoods near each other or near you, what do you notice about energy burdens? What are the common themes of statistics in high energy burden communities?

Respond in a report analyzing one area with differing energy burdens.
Energy Policy Analysis

Prompt suggestion
Analyze this piece of energy policy with the Energy Justice Scorecard.

Share your rating with the people near you/with the class.

Where do you rate it the same? What aspects are different?
Energy Justice Data Visualization

Prompt suggestion
Break into groups and explore BU Energy Justice questions/case studies. Pose your question to class and explain how data is used to demonstrate issues of energy justice.

Then, have students explore their own energy justice question and create their own data visualization or story through research.
